Harvest Holidays Around the World

By Ruby · 2026-09-14 · 172 words · L3

나라마다 다른 추석 같은 명절

Many countries have a special holiday to say thank you for food and family. These holidays look different, but they share the same feeling.

Let's look at three harvest holidays from around the world!

🌕 Chuseok — South Korea

Chuseok is a big Korean holiday in autumn. Families come together and eat special rice cakes called 'songpyeon.'

They also visit the graves of their ancestors to show respect. It is a time for family, food, and full moons.

🏮 Mid-Autumn Festival — China

People in China celebrate this holiday on a full moon night in autumn. Families eat round moon cakes and look at the bright moon together.

The round shape means family and togetherness. Lanterns light up the streets in many cities.

🍁 Labor Thanksgiving Day — Japan

Japan has a holiday called 'Kinro Kansha no Hi' every November 23rd. People say thank you for hard work and for the year's harvest.

School children sometimes make cards to give to workers in their town. It is a gentle and thankful day.

한글 요약

세계 여러 나라에는 음식과 가족에 감사하는 수확 명절이 있습니다. 한국의 추석, 중국의 중추절, 일본의 근로감사의 날은 모두 가족이 함께 모여 한 해의 수확에 감사하는 공통점이 있습니다. 나라마다 즐기는 방식은 달라도, 감사하는 마음은 모두 같습니다.

WORDS & MEANINGS

harvest 수확, 추수

ancestor 조상

respect 존경, 예의

togetherness 함께함, 유대감

lantern 등불, 초롱

celebrate 기념하다, 축하하다

autumn 가을

How Your Fingerprint Can Open a Door

By Ruby · 2026-09-14 · 105 words · L2

지문으로 문이 열리는 원리

Have you ever seen a door that opens with a touch? Some doors use a fingerprint scanner. This machine reads the lines on your finger.

Every person has a different fingerprint. No two people in the world have the same pattern. That makes fingerprints a great way to check who someone is.

When you touch the scanner, it takes a picture of your fingerprint. Then it compares the picture to one saved inside the machine. If they match, the door opens.

Fingerprint scanners are now in phones, schools, and offices. Some airports even use them. It is a fast and safe way to unlock things.

한글 요약

지문은 사람마다 모두 달라서, 누가 누구인지 확인하는 데 사용할 수 있습니다. 지문 스캐너는 손가락을 대면 저장된 지문과 비교해서 문이나 기기의 잠금을 열어 줍니다. 지금은 휴대폰, 학교, 공항 등 다양한 곳에서 지문 스캐너를 활용하고 있습니다.

WORDS & MEANINGS

scanner 스캐너, 판독기

fingerprint 지문

pattern 무늬, 패턴

compare 비교하다

match 일치하다

unlock 열다, 잠금을 해제하다

safe 안전한

How Many Bones Are in Your Body?

By Ruby · 2026-09-14 · 162 words · L3

우리 몸의 뼈는 몇 개일까

Did you know your body is full of bones? Bones give your body its shape and help you move every day.

Babies are born with about 270 to 300 bones in their bodies. That is many more bones than adults have!

As a baby grows, many small bones slowly join together. By the time a person becomes an adult, they have only 206 bones.

So where did all the extra bones go? They did not disappear — they fused, or joined together, to make bigger, stronger bones.

Bones do more than just hold your body up. They also protect your heart, lungs, and brain from getting hurt.

Deep inside your bones, there is something called bone marrow. Bone marrow makes the blood cells that travel around your body.

Bones need calcium to stay strong and healthy. You can get calcium from foods like milk, cheese, and leafy green vegetables.

Your skeleton is amazing and always working hard — even while you sleep!

한글 요약

우리 몸속의 뼈는 아기 때 약 270~300개이지만, 자라면서 작은 뼈들이 합쳐져 어른이 되면 206개가 됩니다. 뼈는 몸을 지탱하고, 심장·폐·뇌를 보호하며, 골수를 통해 혈액 세포를 만드는 중요한 역할을 합니다. 뼈를 튼튼하게 유지하려면 우유나 치즈, 녹색 채소처럼 칼슘이 풍부한 음식을 먹는 것이 중요합니다.

WORDS & MEANINGS

bone 뼈

fuse 융합하다, 합쳐지다

protect 보호하다

marrow 골수

calcium 칼슘

skeleton 골격, 뼈대

cell 세포

Where Does Your Food Waste Go?

By Ruby · 2026-09-14 · 160 words · L3

음식물 쓰레기는 어디로 갈까

Every day, people throw away a lot of food. Bread, fruit, vegetables — food waste is a big problem around the world. But where does all that thrown-away food actually go? Let's look at three places food waste ends up.

Landfills

Most food waste goes to a landfill. A landfill is a big place in the ground where people put trash. When food rots in a landfill, it makes a gas called methane. This gas is bad for the air and the planet.

Compost

Some people put food scraps into a compost bin. Food like banana peels and vegetable scraps can go in. Over time, the scraps break down and become good soil. Farmers can use this soil to grow new food!

Animal Feed

Some food scraps go to farms as animal feed. Pigs and chickens can eat many kinds of leftover food. This is a smart way to use food scraps. It means less waste goes to the landfill.

한글 요약

버려진 음식물 쓰레기는 주로 매립지, 퇴비, 동물 사료 이렇게 세 가지 방법으로 처리됩니다. 매립지에서 음식이 썩으면 환경에 해로운 메탄 기체가 발생하지만, 퇴비로 만들면 농사에 유용한 흙이 됩니다. 음식 찌꺼기를 동물 사료로 활용하면 매립지로 가는 쓰레기의 양을 줄일 수 있습니다.

WORDS & MEANINGS

waste	낭비, 쓰레기	compost	퇴비
landfill	매립지	scraps	음식 찌꺼기, 조각
rot	썩다	soil	흙, 토양
gas	기체, 가스		

How Far Can Volcanic Ash Travel?

By Ruby · 2026-09-14 · 105 words · L2

화산재는 어디까지 날아갈까

When a volcano erupts, it shoots hot ash high into the sky. This ash can travel very far from the volcano.

Some ash goes only a few kilometers away. But big eruptions can send ash up to 20 kilometers into the air. Up there, strong winds carry it across countries and even oceans.

In January 2026, a volcano called Ruang* in Indonesia erupted. It sent ash all the way into the stratosphere,* a very high layer of the sky.

Scientists track where ash goes using satellites and special tools. Ash can stay in the sky for weeks. It can even make sunsets look more colorful!

한글 요약

화산이 폭발하면 뜨거운 화산재가 하늘 높이 솟아올라 바람을 타고 다른 나라나 바다 건너까지 날아갈 수 있습니다. 2026년 1월, 인도네시아의 루앙 화산이 폭발하면서 화산재가 성층권이라는 아주 높은 하늘 층까지 올라갔습니다. 과학자들은 인공위성으로 화산재의 이동 경로를 추적하며, 화산재는 하늘에서 몇 주간 머물며 노을을 더욱 아름답게 만들기도 합니다.

WORDS & MEANINGS

volcano 화산

erupt 분출하다, 폭발하다

ash 재, 화산재

layer 층

stratosphere 성층권

satellite 인공위성

track 추적하다, 따라가다

Why Do Migrating Birds Fly in a V?

By Ruby · 2026-09-14 · 145 words · L3

철새는 왜 V자로 날까

Have you ever looked up and seen birds flying in a V shape? Many birds do this when they travel long distances. Let's look at three cool reasons why.

They Save Energy

When a bird flaps its wings, it pushes air up on the sides. The bird flying behind can ride this rising air. This helps it fly without working as hard.

They Take Turns Leading

The bird at the front of the V works the hardest. So the birds take turns. Each bird moves to the back after a while, and another bird leads.

Scientists Checked the Facts

Scientists studied a bird called the northern bald ibis.* They put small trackers on the birds. The data showed that birds in the V had slower heartbeats. This means they were not tired as quickly.

Isn't it amazing that birds figured this out on their own?

한글 요약

많은 새들이 먼 거리를 날 때 V자 모양을 이루는 데는 과학적인 이유가 있어요. 앞 새가 만들어 주는 올라오는 공기를 타면 뒤따르는 새들이 힘을 훨씬 덜 쓸 수 있고, 새들은 서로 번갈아 가며 맨 앞을 맡아요. 과학자들이 추적기로 실제 연구한 결과, V자 대형으로 나는 새들은 심장 박동이 느려서 덜 지친다는 사실이 확인되었어요.

WORDS & MEANINGS

distance 거리

flap (날개를) 퍼덕이다

rising 올라가는, 상승하는

lead 앞장서다, 이끌다

tracker 추적 장치

heartbeat 심장 박동

data 자료, 데이터
