# Fun Traditional Games From Around the World

By Ruby · 2026-08-24 · 166 words · L3

세계의 전통 놀이는 어떻게 다를까

Kids around the world love to play games. But did you know that traditional games can be very different from country to country?

Let's look at three fun traditional games from different places!

## 🎮 Kabaddi — India

Kabaddi is a team game from India. One player runs into the other team's side and tries to tag players.

The player must keep chanting 'kabaddi, kabaddi' the whole time. This shows they are still on one breath. It is exciting and fast!

## 🎮 Boca de Sapo — Brazil

Boca de Sapo means 'frog's mouth' in Portuguese. Players try to throw a coin into a small hole in a wooden box.

It sounds easy, but it is tricky! People in Brazil have played this game for a very long time.

## 🎮 Kubb — Sweden

Kubb is an outdoor game from Sweden. Players throw wooden sticks to knock down wooden blocks.

The goal is to knock down the king block last. Families often play Kubb together in parks and gardens.

### 한글 요약

세계 여러 나라에는 저마다 독특한 전통 놀이가 있습니다. 인도의 카바디는 숨을 참으며 상대를 태그하는 팀 게임이고, 브라질의 보카 데 사포는 나무 상자 구멍에 동전을 던져 넣는 놀이이며, 스웨덴의 쿠브는 나무 막대기로 블록을 쓰러뜨리는 야외 게임입니다. 이처럼 나라마다 다양한 전통 놀이를 통해 그 나라의 문화를 엿볼 수 있습니다.

### WORDS & MEANINGS

**traditional** 전통적인  
**chant** 반복해서 외치다  
**breath** 숨, 호흡  
**wooden** 나무로 만든

**knock down** 쓰러뜨리다  
**tricky** 까다로운, 어려운  
**block** 블록, 토막

# How Do Automatic Doors Know You Are There?

By Ruby · 2026-08-24 · 158 words · L3

자동문은 사람을 어떻게 알아볼까

**Y**ou walk toward a store, and the door opens by itself. How does it know you are coming?

Automatic doors use special sensors to find people nearby. A sensor is a small device that can feel things around it.

One common type is a microwave sensor. It sends out invisible waves, like a bat sending out sound.

When the waves hit a moving person, they bounce back differently. The sensor notices this change and tells the door to open.

Another type is an infrared sensor. It feels heat from your body, because people give off warmth.

When the sensor finds heat nearby, it sends a signal. The door gets the signal and slides open for you.

Many doors use both sensors together. This helps the door work better and makes fewer mistakes.

Isn't it cool that a door can 'see' you without eyes? Next time you walk through one, think about the tiny sensor working hard above you!

## 한글 요약

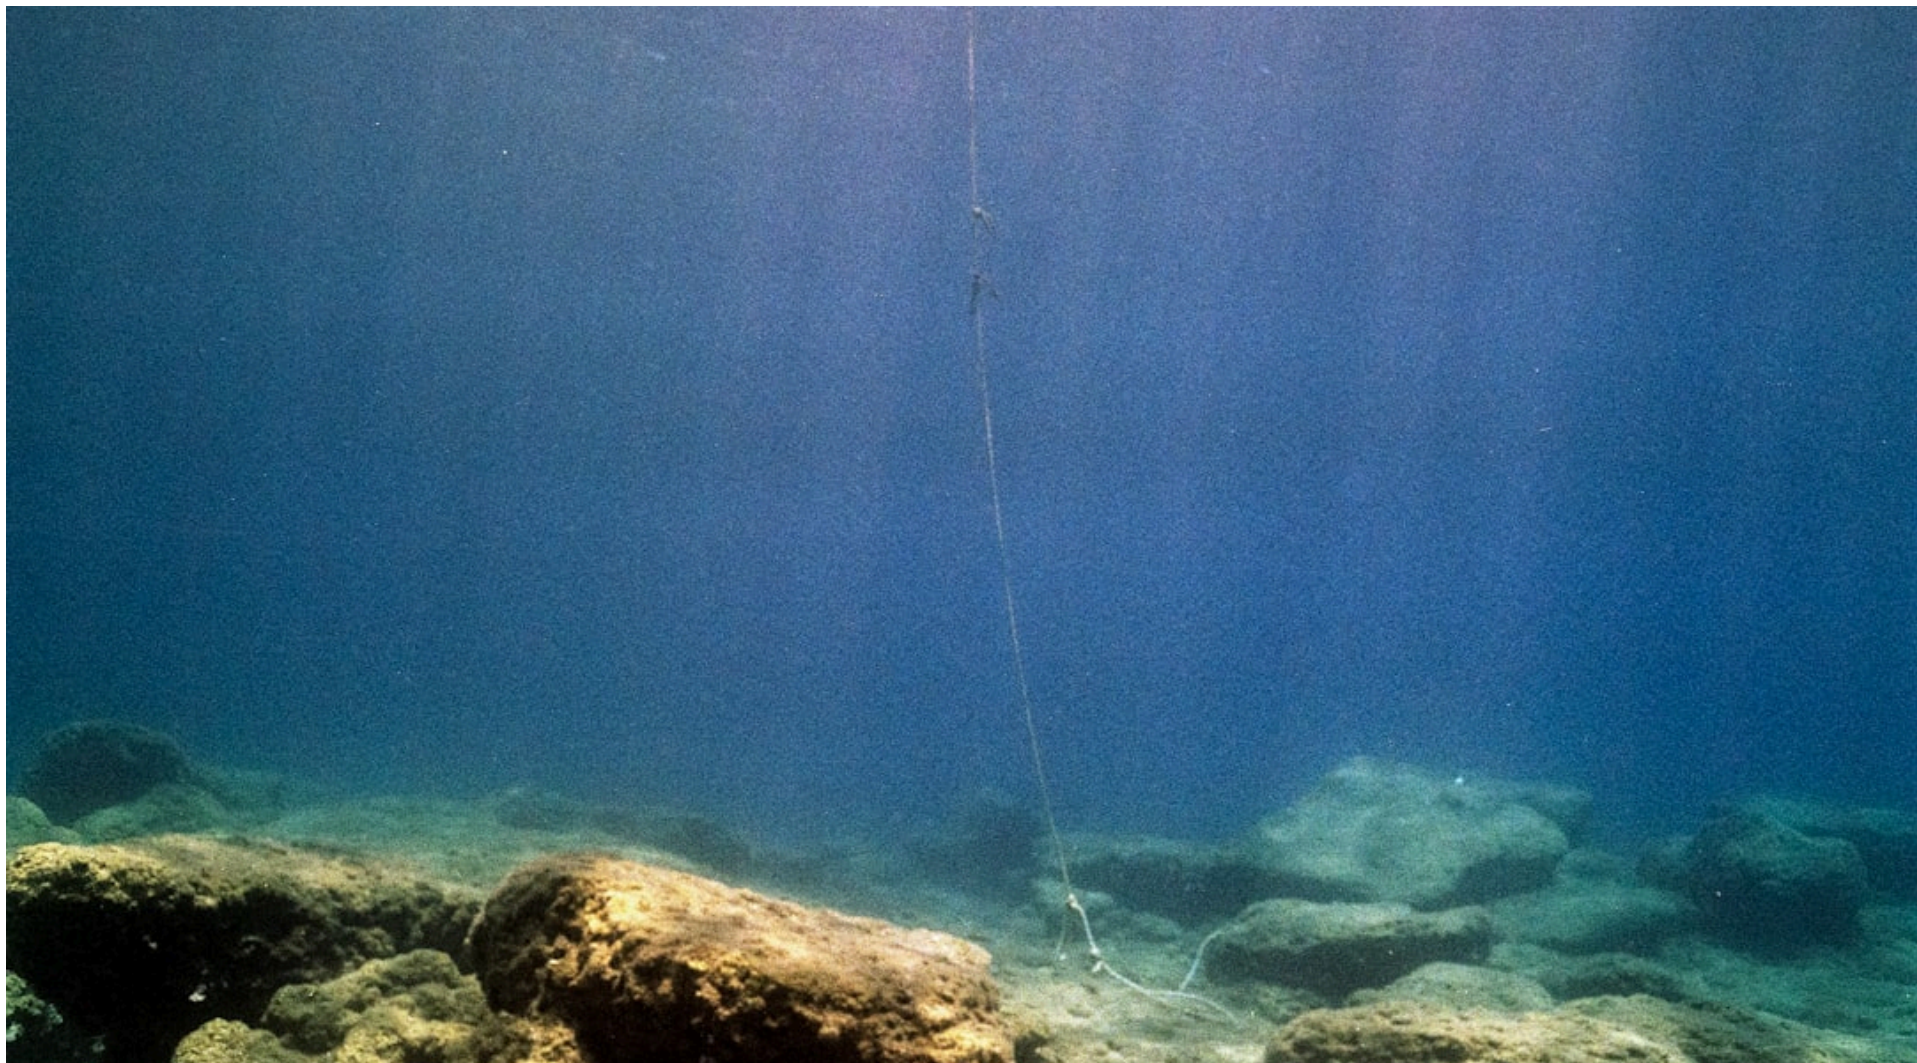

자동문은 마이크로파 센서와 적외선 센서를 이용해 근처에 있는 사람을 감지합니다. 마이크로파 센서는 눈에 보이지 않는 파동을 보내 움직임을 찾아내고, 적외선 센서는 사람의 몸에서 나오는 열을 감지해 문을 열라는 신호를 보냅니다. 많은 자동문은 두 가지 센서를 함께 사용해서 더 정확하게 작동합니다.

## WORDS & MEANINGS

|                  |         |                  |          |
|------------------|---------|------------------|----------|
| <b>sensor</b>    | 감지기, 센서 | <b>bounce</b>    | 튀다, 반사되다 |
| <b>device</b>    | 장치, 기기  | <b>infrared</b>  | 적외선의     |
| <b>invisible</b> | 보이지 않는  | <b>signal</b>    | 신호       |
| <b>wave</b>      | 파동, 파장  | <b>automatic</b> | 자동의      |

# Lost Fishing Nets Still Trap Sea Animals

By Ruby · 2026-08-24 · 160 words · L3

버려진 어망이 바다에서 하는 일

Every year, fishers lose or leave behind their nets in the ocean. These nets do not just sink and disappear. Lost nets keep floating and moving through the water. Fish, turtles, dolphins, and seabirds can swim into them and get stuck. Animals that get trapped cannot escape. Many of them die because they cannot move or reach the surface to breathe. People call these lost nets 'ghost nets.' They are hard to see underwater, so animals do not notice them. Ghost nets are made of nylon. Nylon is very strong and takes a very long time to break down in the ocean. Volunteer divers help by going underwater to find and pull out ghost nets. It is difficult and dangerous work. Some groups turn the old nets into new things, like bags or shoes. This stops the nets from going back into the sea. You can help too! Learning about ghost nets and telling others is a great first step.

## 한글 요약

매년 바다에 버려지는 그물을 '유령 그물'이라고 하는데, 물속에서 잘 보이지 않아 물고기, 거북이, 돌고래 같은 동물들이 걸려 목숨을 잃습니다. 유령 그물은 나일론으로 만들어져 분해되는 데 매우 오랜 시간이 걸리기 때문에 오랫동안 바다를 오염시킵니다. 자원봉사 잠수부들이 그물을 수거하거나 새로운 물건으로 재활용하는 활동을 하고 있으며, 우리도 유령 그물에 대해 알리는 것으로 도움을 줄 수 있습니다.

## WORDS & MEANINGS

|                |             |                  |       |
|----------------|-------------|------------------|-------|
| <b>net</b>     | 그물          | <b>volunteer</b> | 자원봉사자 |
| <b>trap</b>    | 가두다, 덫에 걸리다 | <b>nylon</b>     | 나일론   |
| <b>escape</b>  | 탈출하다        | <b>diver</b>     | 잠수부   |
| <b>surface</b> | 수면, 표면      |                  |       |

# Why Is the Ocean So Salty?

By Ruby · 2026-08-24 · 176 words · L3

바닷물은 왜 짭까

Have you ever tasted ocean water? It is very salty! But why?

Rain falls on land and flows into rivers. As water moves over rocks, it picks up tiny bits of salt and minerals.

The rivers carry that salt all the way to the ocean. This has happened for billions of years.

Once the salt is in the ocean, it stays. Water leaves the ocean by evaporating into the air, but salt cannot evaporate. It stays behind.

On average, ocean water is about 3.5 percent salt. That means about 35 grams of salt sit in every liter of ocean water.

Some parts of the ocean are saltier than others. Hot places lose more water to evaporation, so the salt gets stronger there.

The Dead Sea\* is one of the saltiest bodies of water on Earth. It is about ten times saltier than the ocean!

\*Dead Sea: a very salty lake between Jordan and Israel

So next time you swim in the ocean, remember — millions of years of rain and rivers made it taste that way.

## 한글 요약

빗물이 바위 위를 흐르면서 소금을 녹여 강을 통해 바다로 운반하고, 이 과정이 수십억 년 동안 반복되면서 바다가 점점 짜게 되었습니다. 바닷물이 증발할 때 소금은 함께 날아가지 못하고 바다에 그대로 남기 때문에 소금의 양은 계속 쌓입니다. 현재 바닷물의 소금 농도는 평균 약 3.5퍼센트이며, 사해처럼 특히 더운 지역의 바다는 일반 바다보다 훨씬 더 짭니다.

## WORDS & MEANINGS

**salty** 짭

**mineral** 미네랄, 광물

**evaporate** 증발하다

**average** 평균의

**billion** 10억

**flow** 흐르다

**percent** 퍼센트, 백분율

# Why Do We See Lightning Before Thunder?

By Ruby · 2026-08-24 · 157 words · L3

번개는 왜 소리보다 먼저 보일까

Have you ever seen a flash of lightning and then heard a loud boom? That boom is thunder, but why does lightning always come first?

Light and sound travel at very different speeds. Light moves incredibly fast — about 300,000 kilometers every second. Sound moves much slower — only about 340 meters every second.

When lightning strikes, it makes both light and sound at the same time. But the light reaches your eyes almost instantly, while sound takes much longer. So you see the flash first, and then you hear the thunder.

Here is something cool you can try during a storm. Count the seconds between the lightning flash and the thunder. Every three seconds means the storm is about one kilometer away.

Thunder happens because lightning heats the air, and the hot air expands quickly. This expansion creates that big booming sound you hear.

Now you know why light always wins the race to your senses!

## 한글 요약

번개가 칠 때 빛과 소리는 동시에 만들어지지만, 빛이 소리보다 훨씬 빠르게 이동하기 때문에 번개가 천둥보다 먼저 보입니다. 번개와 천둥 사이의 시간을 세면 폭풍까지의 거리를 알 수 있는데, 3초마다 약 1킬로미터 떨어진 것입니다. 천둥소리는 번개가 공기를 가열하고 그 공기가 빠르게 팽창하면서 만들어집니다.

## WORDS & MEANINGS

**lightning** 번개

**thunder** 천둥

**flash** 번쩍임, 섬광

**speed** 속도

**sound** 소리

**expand** 팽창하다, 늘어나다

**instantly** 즉시, 순식간에

# How Arctic Foxes Stay Warm in Winter

By Ruby · 2026-08-24 · 173 words · L3

북극여우는 어떻게 겨울을 버틸까

**W**inter in the Arctic is very, very cold. Temperatures can drop to minus 50 degrees Celsius. But arctic foxes are just fine!

These small animals have some amazing tricks. Let's look at three ways arctic foxes survive the freezing winter.

## A Super-Thick Coat

Arctic foxes grow a very thick, fluffy coat in winter. This coat keeps their body warm even in the coldest weather.

In winter, their fur turns white. This helps them hide in the snow.

## Built for the Cold

Arctic foxes have short ears and a short nose. Less skin is open to the cold air, so less heat leaves their body.

They also have thick fur on the bottom of their paws. Walking on ice does not hurt them at all.

## Staying Safe and Fed

Arctic foxes curl up and wrap their big, fluffy tail around their body like a blanket. This keeps them extra warm.

They eat small animals called lemmings and also find food left by polar bears. They always find a way to eat!

### 한글 요약

북극여우는 영하 50도까지 내려가는 혹독한 북극의 겨울에서도 살아남는 놀라운 동물입니다. 두꺼운 흰색 털, 짧은 귀와 코, 털이 덮인 발바닥 덕분에 추위를 잘 견딜 수 있습니다. 또한 꼬리를 담요처럼 두르고 몸을 따뜻하게 유지하며, 레밍이나 북극곰이 남긴 먹이를 먹으며 겨울을 이겨냅니다.

### WORDS & MEANINGS

**temperature** 온도, 기온

**survive** 살아남다

**thick** 두꺼운

**freeze** 얼다, 얼어붙다

**curl up** 몸을 웅크리다

**wrap** 감싸다

**paw** (동물의) 발
