How Do Whales Breathe?

By Leo · 2026-09-14 · 78 words · L2

고래는 어떻게 숨을 쉴까

Whales live in the sea. But they are not fish!

Whales need air to breathe. They have a hole on top of their head. It is called a blowhole.

A whale swims up to the top. Then it breathes out. You can see a big puff of mist!

After that, it breathes in. Then it goes back down. Wow, isn't that cool?

You can breathe too. But you use your nose! Whales and you are not so different.

The lost acorns stay in the ground. They grow into big oak trees. Isn't that cool?

So squirrels help grow new trees. They do not even know it!

Spiders make sticky webs. They catch bugs in the web.
