Nations Work Together to Protect Migratory Birds

By Sunny · 2026-08-17 · 128 words · L1

국경을 넘나드는 철새 보호 협약

Every year, billions of birds travel across countries to find food and warmer weather. These birds are called migratory birds. Protecting them is not easy because they cross many borders.

In 1979, many countries signed an agreement called the Convention on Migratory Species, or CMS. This agreement asks countries to work together to protect animals that move between different lands. Over 130 countries have joined so far.

Under the agreement, countries share information and make rules to keep migratory birds safe. They protect important resting spots along the birds' routes. Some birds fly thousands of kilometers each year.

Scientists say that migratory birds help nature by spreading seeds and eating insects. When one country protects birds, other countries benefit too. That is why global teamwork is so important.

Cutting Down on Disposable Delivery Containers

By Sunny · 2026-08-17 · 178 words · L2

일회용 배달 용기를 줄이는 방법

Every day, millions of food deliveries arrive in plastic containers that people throw away after just one meal. This waste is a growing problem for the environment, because most of these containers are hard to recycle.

One smart solution is to use reusable containers. In the Czech Republic, a company called MIWA sends food in containers that customers return after use. The company then cleans them and uses them again.

Some countries have also tried a deposit system, where customers pay a small extra fee when they order food. They get the fee back when they

return the clean container. This encourages people to send packaging back instead of throwing it away.

Governments and businesses are working on this problem together. Some restaurants now offer discounts to customers who bring their own containers. A few cities have even made rules that limit how much single-use plastic delivery businesses can use.

Experts say that small choices add up quickly. If millions of people choose reusable options, the amount of plastic waste could drop by a huge amount every year.

Smart Tech Gives Disabled Athletes a New Edge

By Sunny · 2026-08-17 · 209 words · L3

장애인 스포츠의 기술 장비

Technology is changing the way athletes with disabilities train and compete. Special devices and sensors now help coaches and athletes understand the body in ways that were not possible before.

Wearing the Data

Small sensors can be worn on the body during training and competition. These devices measure movement, speed, and muscle activity. Because the sensors collect data in real time, coaches can see exactly what is happening during a race or a game.

Researchers have found that this information helps teams decide the best training plan for each athlete. It can also help prevent injuries by showing when a body part is under too much stress.

Built for Every Body

Some athletes use wheelchairs, prosthetic limbs, or other equipment. Sensors help teams check whether this equipment fits the athlete well. If the fit is poor, small changes can make a big difference in speed and comfort.

In wheelchair racing, for example, sensor data has helped athletes improve their pushing style. This kind of feedback is very hard to get just by watching with the eyes.

Disability sports are growing around the world, and technology is helping more athletes reach their full potential. As the tools become smaller and cheaper, even more teams will be able to use them.

Korean Webtoons Win Fans Around the World

By Sunny · 2026-08-17 · 136 words · L1

웹툰이 세계로 나가는 길

Korean webtoons are becoming popular all over the world. A webtoon is a comic that people read on their phones or computers. The stories scroll down the screen, which makes them easy to read.

Webtoons started in South Korea many years ago. At first, they were only in Korean. But now, many webtoons are translated into English, Spanish, French, and other languages.

People in many countries enjoy webtoons because the art is colorful and the stories are exciting. Platforms that share webtoons have millions of readers outside of Korea. Some popular webtoons have even been turned into TV shows and films.

As webtoons spread globally, more artists from other countries are making their own webtoons too. This shows that the format works well for storytellers everywhere. Webtoons may be changing the way the world reads comics.

Schools Are Teaching Students to Manage Money

By Sunny · 2026-08-17 · 167 words · L2

용돈을 관리하는 법을 배우는 학교

More schools around the world are adding personal finance classes to their timetable. Students learn how to handle money, make a budget, and save wisely. In the United States, nine states now require schools to teach these skills before students graduate.

Personal finance education covers topics such as spending, saving, borrowing, and planning for the future. A budget is a plan that shows how much money you have and where it goes. Many experts say that learning these habits early makes a big difference later in life.

Some schools use real-life activities to make the lessons interesting. Students might track their own pocket money, compare prices at a shop, or plan a small event with a limited budget. These hands-on tasks help students see how money works in everyday situations.

Many young people say that money lessons feel more useful than they expected. As more schools add finance to their programs, students may be better prepared for adult life and the financial choices that come with it.

Can Teachers Tell If AI Wrote Your Homework?

By Sunny · 2026-08-17 · 200 words · L3

AI가 쓴 숙제를 가려낼 수 있을까

AI writing tools are becoming popular with students around the world. Some students use them to write essays or answer homework questions. But can teachers really tell when AI has written the work?

How AI Writing Is Different

AI-generated text often has its own patterns. It tends to use very smooth sentences, perfect grammar, and similar phrases over and over. Human writing, on the other hand, is messier and more personal.

Tools That Spot AI Text

Several detection tools have been built to catch AI-written work. They look for things like unusual word

choices and writing patterns that do not match a student's normal style. Some researchers have also developed software that compares a student's different pieces of writing to check whether the same person wrote all of them.

However, these tools are not perfect. AI is improving quickly, and some AI-written text is now very hard to tell apart from human writing.

Teachers and schools are still trying to figure out the best way to handle this. Many now ask students to write in class, so there is no chance to use AI. It is an open question, and the answer keeps changing as technology moves forward.

Why Are More Teens Going Nearsighted?

By Sunny · 2026-08-17 · 176 words · L2

청소년 근시가 늘어나는 이유

More young people around the world are becoming nearsighted, and experts want to know why. Nearsightedness, or myopia, means a person can see things up close but not clearly far away.

In the United States, about 25% of people were nearsighted in 1971. By 2017, that number had risen to 42%. Similar increases have been found in many other countries, especially in East Asia.

Researchers believe two main habits are driving this change. Spending long hours reading or looking at screens puts the eyes

under constant close-up strain. In addition, children today spend far less time outdoors than past generations did. Natural light helps the eyes grow correctly, so less time outside may increase myopia risk.

The good news is that simple changes can help. Eye doctors suggest taking regular breaks from screens and spending at least two hours outside each day. Some special contact lenses have also been shown to slow how quickly myopia gets worse in teenagers. Parents and students should talk to an eye doctor if they notice any changes in their vision.

Unmanned Stores Change Local Shopping Streets

By Sunny · 2026-08-17 · 120 words · L1

무인 매장이 바뀌는 동네 상권

In many neighborhoods, small unmanned stores are opening up. These shops have no staff, so customers pay by themselves using a machine.

Unmanned stores are open all day and all night. Because there are no workers to pay, owners can keep their costs low. Many sell snacks, drinks, or everyday items.

However, some small shop owners nearby are worried. Customers may choose the unmanned store because it is always open and sometimes cheaper. As a result, traditional small shops lose business.

In recent years, more of these stores have appeared in towns across the country. People are still discussing whether they are good or bad for local areas. It will be interesting to see how neighborhoods change in the future.
