How Does a Baby Chick Crack Its Egg?

By Leo · 2026-08-10 · 78 words · L2

병아리는 어떻게 알에서 나올까

A baby chick grows inside an egg. It is so tiny at first!

The egg has a hard shell. But the chick needs to get out.

The chick has a small, sharp tip on its beak. It is called an egg tooth. The chick uses it to tap the shell.

Tap, tap, tap! A small crack starts to form. Then the chick pushes hard and breaks out!

Isn't that amazing? The little chick did it all by itself!
