Special Bridges Help Wildlife Cross Safely

By Sunny · 2026-08-03 · 198 words · L3

야생동물이 건너는 생태 통로

Every year, millions of animals are killed on roads around the world. Cars and highways cut through forests and fields, making it dangerous for wildlife to move from one area to another.

Roads That Divide Nature

Animals need to travel to find food, water, and mates. When a busy highway runs through their habitat, crossing it can be deadly. Some species, like elk and deer, are large enough to cause serious car accidents too.

Wildlife crossings are special structures that help animals move safely. They can be bridges built over highways or tunnels dug under

roads. Engineers design them to feel natural, with plants, soil, and trees on top.

Bridges That Really Work

In Banff National Park in Canada, wildlife crossings have been used for many years. Studies show that bears, wolves, and cougars all use them regularly. In Colorado, a new overpass on Interstate 25 connects two large areas of protected land for elk and deer.

Scientists have found that animals learn to use these crossings over time. One interesting fact is that some animals even leave scent marks to guide others. Because of crossings like these, both wildlife and drivers are much safer on the road.

한글 요약

매년 수백만 마리의 야생동물이 도로에서 목숨을 잃으며, 고속도로가 동물들의 서식지를 가로막아 이동을 위험하게 만들고 있다. 야생동물 통로는 도로 위 다리나 아래 터널 형태로 만들어져 동물들이 안전하게 이동할 수 있도록 돕는 특수 구조물이다. 캐나다 밴프 국립공원 등에서의 연구 결과, 동물들이 이 통로를 점차 익혀 이용하면서 야생동물과 운전자 모두의 안전이 크게 향상된 것으로 확인되었다.

What Young Workers Need to Know

By Sunny · 2026-08-03 · 198 words · L3

청소년 아르바이트와 노동 권리

Many teenagers work part-time jobs to earn money and gain experience. But do they know their rights?

In most countries, the law limits how many hours young people under 18 can work. It also sets rules about dangerous jobs, requiring employers to keep young workers safe.

One important right is getting a work contract before starting a job. A contract is a written agreement that explains the hours, pay, and duties of the job. Without one, it can be hard for a young worker to prove what they were promised.

Pay and Protection

Young workers are also protected by minimum wage laws. This means an

employer must pay at least a set amount per hour. If a worker is paid less than the minimum wage, they have the right to complain to a government labor office.

Knowing Your Rights

Many young workers are not sure what the rules are, so they may not speak up when something is wrong. Learning about labor rights before starting a job is very useful. Schools and community centers sometimes offer information sessions to help teens understand what to expect.

Knowing your rights is the first step to being treated fairly at work.

한글 요약

청소년 근로자는 근무 시간 제한, 근로계약서 작성, 최저임금 보장 등 법적으로 여러 권리를 보호받는다. 하지만 많은 청소년들이 자신의 노동권을 잘 몰라 부당한 상황에서도 목소리를 내지 못하는 경우가 많다. 일을 시작하기 전에 노동권을 미리 공부해 두면 직장에서 공정한 대우를 받는 데 큰 도움이 된다.

WORDS & MEANINGS

part-time 시간제, 아르바이트
contract 계약서, 계약
employer 고용주
minimum wage 최저 임금

labor 노동, 근로
rights 권리
complain 불평하다, 신고하다

Mining Gold From Old Electronics

By Sunny · 2026-08-03 · 162 words · L2

전자 폐기물에서 금속을 캐낸다

Old phones and laptops contain real gold, silver, and other valuable metals. Most people throw these devices away, but scientists have found a smarter way to get those metals back.

This process is called urban mining. Instead of digging metals out of the earth, urban mining recovers them from electronic waste, which is old or broken tech equipment. Each year, the world produces millions of tonnes of this waste.

Researchers have developed a method that uses a powerful burst of electricity called

flash Joule heating. It heats electronic waste for just one second, and the metals separate from the other materials. Studies show the recovery rates for metals like rhodium, palladium, and silver can be very high with this approach.

This discovery is exciting for two reasons. First, it could greatly reduce the amount of harmful e-waste that ends up in landfills. Second, mining metals from the ground causes serious damage to the environment, so urban mining offers a much cleaner option.

한글 요약

오래된 전자기기에는 금, 은 등 귀중한 금속이 들어 있으며, 과학자들은 이를 회수하는 '도시 광업'이라는 방법을 개발했다. 연구팀은 '플래시 줄 가열' 기술을 활용해 전자 폐기물에서 로듐, 팔라듐, 은 등의 금속을 높은 회수율로 분리하는 데 성공했다. 이 기술은 전자 폐기물 문제를 줄이고 기존 채굴 방식으로 인한 환경 파괴를 대신할 친환경적인 해결책으로 주목받고 있다.

What Happens to Old Solar Panels?

By Sunny · 2026-08-03 · 165 words · L2

수명이 끝난 태양광 패널은 어디로 갈까

Solar panels can produce clean energy for about 25 to 30 years. But when they stop working, most of them end up in landfills. This is becoming a big problem because millions of panels are reaching the end of their life.

Solar panels are made from glass, metal, and silicon, which is a material used to catch sunlight. They also contain small amounts of silver and other valuable metals. Because of this mix of materials, they are not easy to recycle.

Some companies are now working on better ways to break down old panels. They separate the glass, metals, and other parts so the materials can be used again. However, this process is expensive, and not many recycling facilities exist yet.

Experts say that as solar energy grows, the world will need much better recycling systems. Some countries have already made rules that require companies to recycle old panels. Scientists are also looking for ways to make future panels easier to recycle from the start.

한글 요약

태양광 패널은 수명이 다하면 대부분 매립지에 버려지는데, 유리 and 금속, 실리콘 등 다양한 재료가 섞여 있어 재활용이 어렵다. 일부 기업들이 패널을 분해해 재료를 재사용하는 방법을 개발하고 있지만, 비용이 높고 재활용 시설도 부족한 실정이다. 이에 일부 국가들은 패널 재활용을 의무화하는 규정을 도입했으며, 과학자들은 처음부터 재활용이 쉬운 패널을 만들기 위한 연구를 진행하고 있다.

WORDS & MEANINGS

landfill 매립지

panel 패널, 판

silicon 실리콘, 규소

valuable 가치 있는, 귀중한

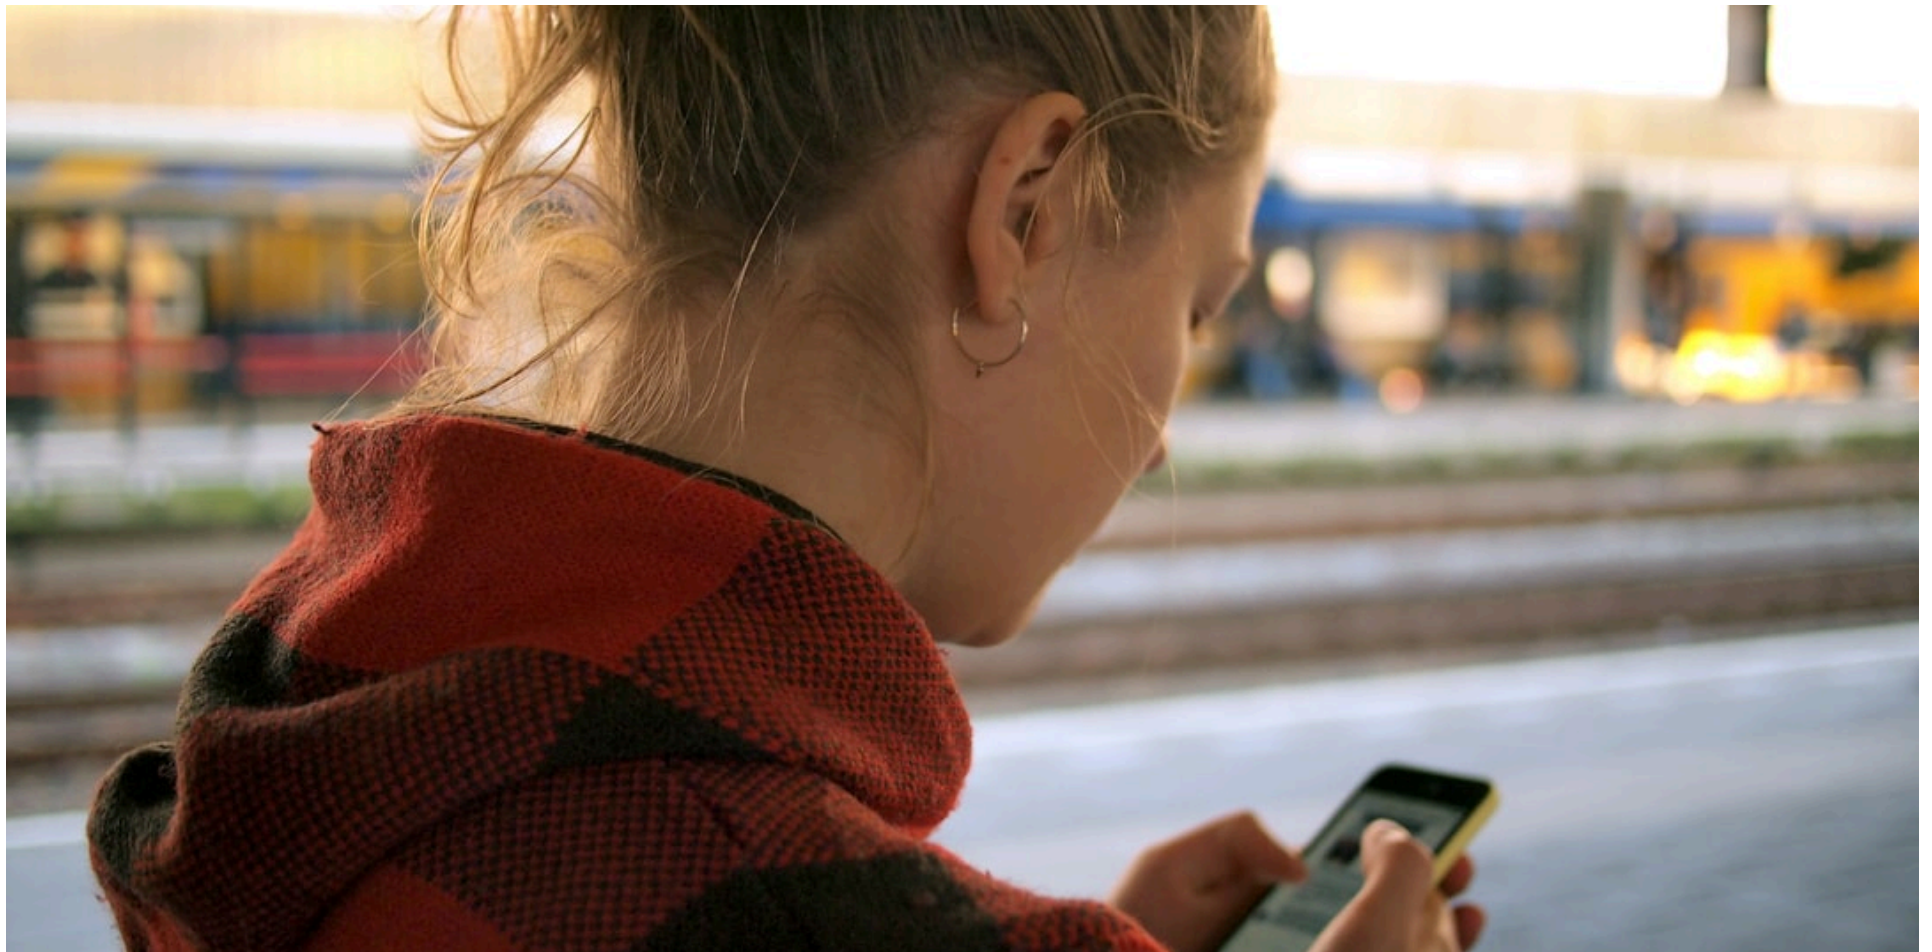

recycle 재활용하다

facility 시설

separate 분리하다, 나누다

Are Short Videos Hurting Your Focus?

By Sunny · 2026-08-03 · 161 words · L2

숏폼 영상과 집중력

Short-form videos are clips that usually last under one minute. Apps like TikTok and YouTube Shorts serve these videos one after another, and many young people watch them for hours every day.

Researchers have found that watching a lot of short videos may make it harder to focus. A 2024 study used EEG technology, which reads electrical signals in the brain, to compare people who watched many short videos with those who watched fewer. The results suggested that heavy users showed differences in brain signals connected to attention.

Experts think this happens because short videos switch topics every few seconds. The brain gets used to receiving new information very quickly, so sitting with one task for a long time can start to feel difficult.

However, researchers also say the effects may not be permanent. Taking regular breaks from short videos and reading or doing focused activities could help. Some schools have already started limiting phone use during class for this reason.

한글 요약

TikTok과 YouTube Shorts 같은 앱의 숏폼 동영상을 지나치게 많이 시청하면 집중력이 떨어질 수 있다는 연구 결과가 나왔다. 2024년 연구에서 EEG 기술로 뇌 신호를 분석한 결과, 숏폼 동영상을 많이 본 사람들은 주의력과 관련된 뇌 신호에서 차이를 보였다. 전문가들은 이 영향이 영구적이지는 않을 수 있으며, 규칙적인 휴식과 독서 등 집중력 활동이 도움이 된다고 조언한다.

Why Pet Registration Matters for Everyone

By Sunny · 2026-08-03 · 123 words · L1

반려동물 등록제가 필요한 이유

Many countries require pet owners to officially register their animals with the government. This system helps keep track of how many pets there are and who owns them.

When a pet gets lost, registration makes it much easier to find the owner. Each registered pet receives a small chip or ID tag, so shelters and vets can quickly check who the animal belongs to.

Registration also helps control the number of abandoned animals. When owners register their pets, they take more responsibility for them. As a result, fewer animals end up on the streets.

In addition, the system helps cities plan better animal care services. Many people believe that pet registration is a simple but important step toward protecting both animals and people.

한글 요약

많은 나라에서 반려동물 주인이 정부에 동물을 공식적으로 등록하도록 요구하고 있다. 등록된 반려동물에는 칩이나 인식표가 부착되어 길을 잃었을 때 주인을 쉽게 찾을 수 있으며, 유기동물의 수를 줄이는 데도 효과적이다. 많은 사람들은 반려동물 등록제가 동물과 사람 모두를 보호하는 중요한 제도라고 여기고 있다.

official 공식적인

abandoned 버려진, 유기된

responsibility 책임

shelter 보호소

chip 칩 (전자 인식 장치)

track 추적하다, 파악하다

Bees Are Moving Into the City

By Sunny · 2026-08-03 · 128 words · L1

도시에서 벌을 키우는 사람들

More and more people are keeping bees in cities. They set up hives on rooftops, in gardens, and even on balconies. This growing trend is spreading around the world.

Urban beekeepers collect honey from their hives. They also help bees survive in busy city environments. Cities actually have many different kinds of flowers and plants, so bees can find a lot of food.

Research shows that city bees can be more diverse than country bees. Farmland often has only one or two types of crops. But cities have parks, gardens, and street trees, which give bees more variety.

Urban beekeeping is good for both people and nature. It helps plants grow through pollination, which means bees carry pollen from flower to flower. Many cities now support this hobby.

한글 요약

최근 도시의 옥상이나 정원에서 꿀벌을 키우는 도시 양봉이 전 세계적으로 확산되고 있다. 도시에는 공원, 정원, 가로수 등 다양한 식물이 있어 꿀벌이 풍부한 먹이를 찾을 수 있으며, 연구 결과 도시 꿀벌이 시골 꿀벌보다 더 다양한 것으로 나타났다. 도시 양봉은 수분을 통해 식물 성장을 돕는 등 사람과 자연 모두에게 긍정적인 영향을 미쳐 많은 도시들이 이를 적극 지원하고 있다.

Smart Glasses Let You See with AI

By Sunny · 2026-08-03 · 175 words · L2

AI 안경으로 세상을 본다

Imagine wearing glasses that can think and give you information at the same time. AI-powered smart glasses are now a real technology, and they are becoming more advanced every year. These glasses use artificial intelligence to help people see and understand the world around them more easily.

Inside the glasses, there is a small camera and a tiny computer that work together. The AI studies what the user is looking at and then provides helpful information right away. For example, the glasses can read signs in foreign languages and translate them instantly for the user.

The glasses can also identify objects and people in real time. Doctors could use them to check patients more carefully during medical examinations. In schools, students might use smart glasses to explore subjects in exciting and interactive new ways.

Researchers around the world are still working hard to improve this technology. They want the AI to understand complex situations much better than it can today. If development continues, smart glasses could become an important everyday tool for millions of people.

한글 요약

AI 기반 스마트 안경은 내부의 카메라와 컴퓨터를 통해 사용자가 보는 것을 분석하고, 외국어 번역이나 사물 식별 같은 유용한 정보를 실시간으로 제공하는 기술이다. 이 안경은 의료 현장과 학교 교육 등 다양한 분야에서 활용될 가능성을 가지고 있다. 전 세계 연구자들이 기술 개선에 힘쓰고 있어, 머지않아 스마트 안경이 많은 사람들의 일상적인 도구가 될 것으로 기대된다.
